

NAB2 → Th1/Th2 → atopic eczema, hop by hop

Two receipt classes, kept distinct

Hops 0-2 (blue) = EXPERIMENTAL receipts (direct perturbation measurements). They license the claim
'consistent with a re-derived NAB2 → Th1/Th2 regulatory role the literature has not made.'

Hop 3 (purple) = ASSOCIATION receipt (a GWAS-based disease label). Licenses a NOMINATION, not a claim
of experimental disease causality. Independent 4-agent audit: 0 papers link NAB2 to either node.
